

TPZ-Net Commissioning Kit

Titan Products have designed bespoke PC commissioning software which enables easy set-up and commissioning of TPZ-Net wireless sensing networks.

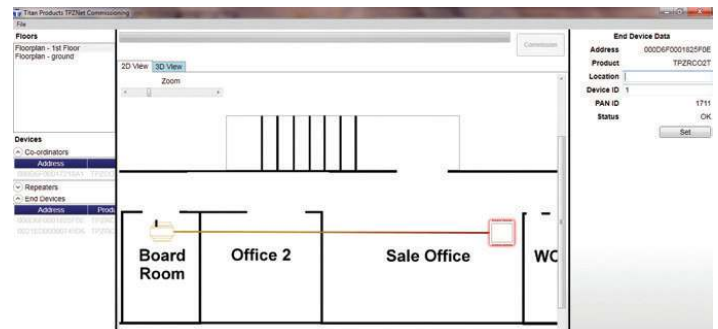

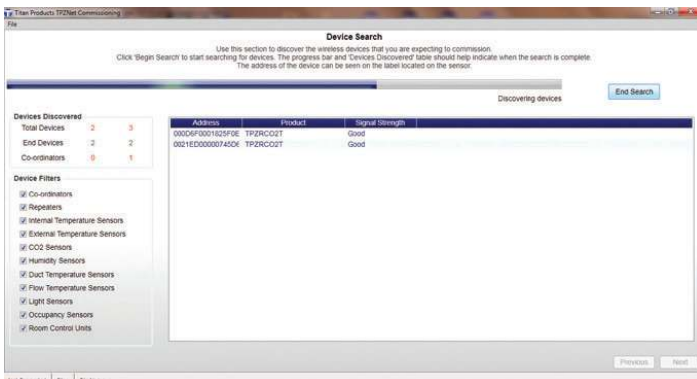

The commissioning software allows for easy set-up of new networks and the ability to edit existing networks by adding, replacing or re-setting devices on the network.

Once a wireless network has been set-up and commissioned, the user can select individual end devices on the network to view the status and values being transmitted to the TPZ-Net Co-ordinator.

The software is supplied with a TPZ-Net commissioning USB dongle that plugs directly into a PC or laptop allowing the user to create or connect to a TPZ-Net Zigbee wireless network.

PC Minimum Requirements

Windows Software:	Windows XP or newer
PC Processor:	400MHz (min) 1GHz (recommended)
RAM:	96MB (min) 256MB (recommended)
Hard Disk Space:	280MB (32 bit) 610MB (64 bit)

Features

- Zigbee wireless technology
- Clear, easy to follow instructions to set-up new networks
- Add devices to existing networks quickly and effortlessly
- Edit networks by removing, replacing and re-setting devices
- View status of end sensing devices
- USB dongle allowing for easy access
- Designed and manufactured in the UK

More from this range

- Zigbee wireless temperature sensors
- Zigbee wireless CO2 sensors
- Zigbee wireless humidity sensors
- Zigbee wireless light and occupancy sensors
